In this Presentation

Here's what we'll cover:

WHY?

- Personal Background
- Business problem
- Original approach

Personal Background

Investment banking analyst

- A major part of my job is **creating pitch books** for potential IPO candidates
- Involves **identifying comparable** listed companies to project potential IPO earnings.

Business Problems

Company Name	Stock Code	Core Business
EXTRA COMPARABLES		
CHOW SANG SANG	00116.HK	The manufacture and retail of jewellery , distribution of watches ...
LUK FOOK GOLD	00590.HK	Retailing of a variety of gold and platinum jewellery and gem-set jewellery products...
CHOW TAI FOOK	01929.HK	Manufacturing and selling of jewellery products...
PRADA	01913.HK	Producing and distributing leather goods, footwear and apparel ...
ORIGINAL COMPARABLES		
TOKYO CHUO	01939.HK	Auction and artwork sales in Hong Kong and Japan...

- Process of finding comparables is imprecise due to **varying judgment criteria** among parties.
- For instance, an **art trading platform** seeking comparables in the HK market faced a challenge as there were no direct competitors.
- We have to use unrelated companies like “Chow Sang Sang” (00116.hk) and “Prada” (01913.hk) as comparables.

Example of real comparable search for art trading platform

So there is an question in my mind:

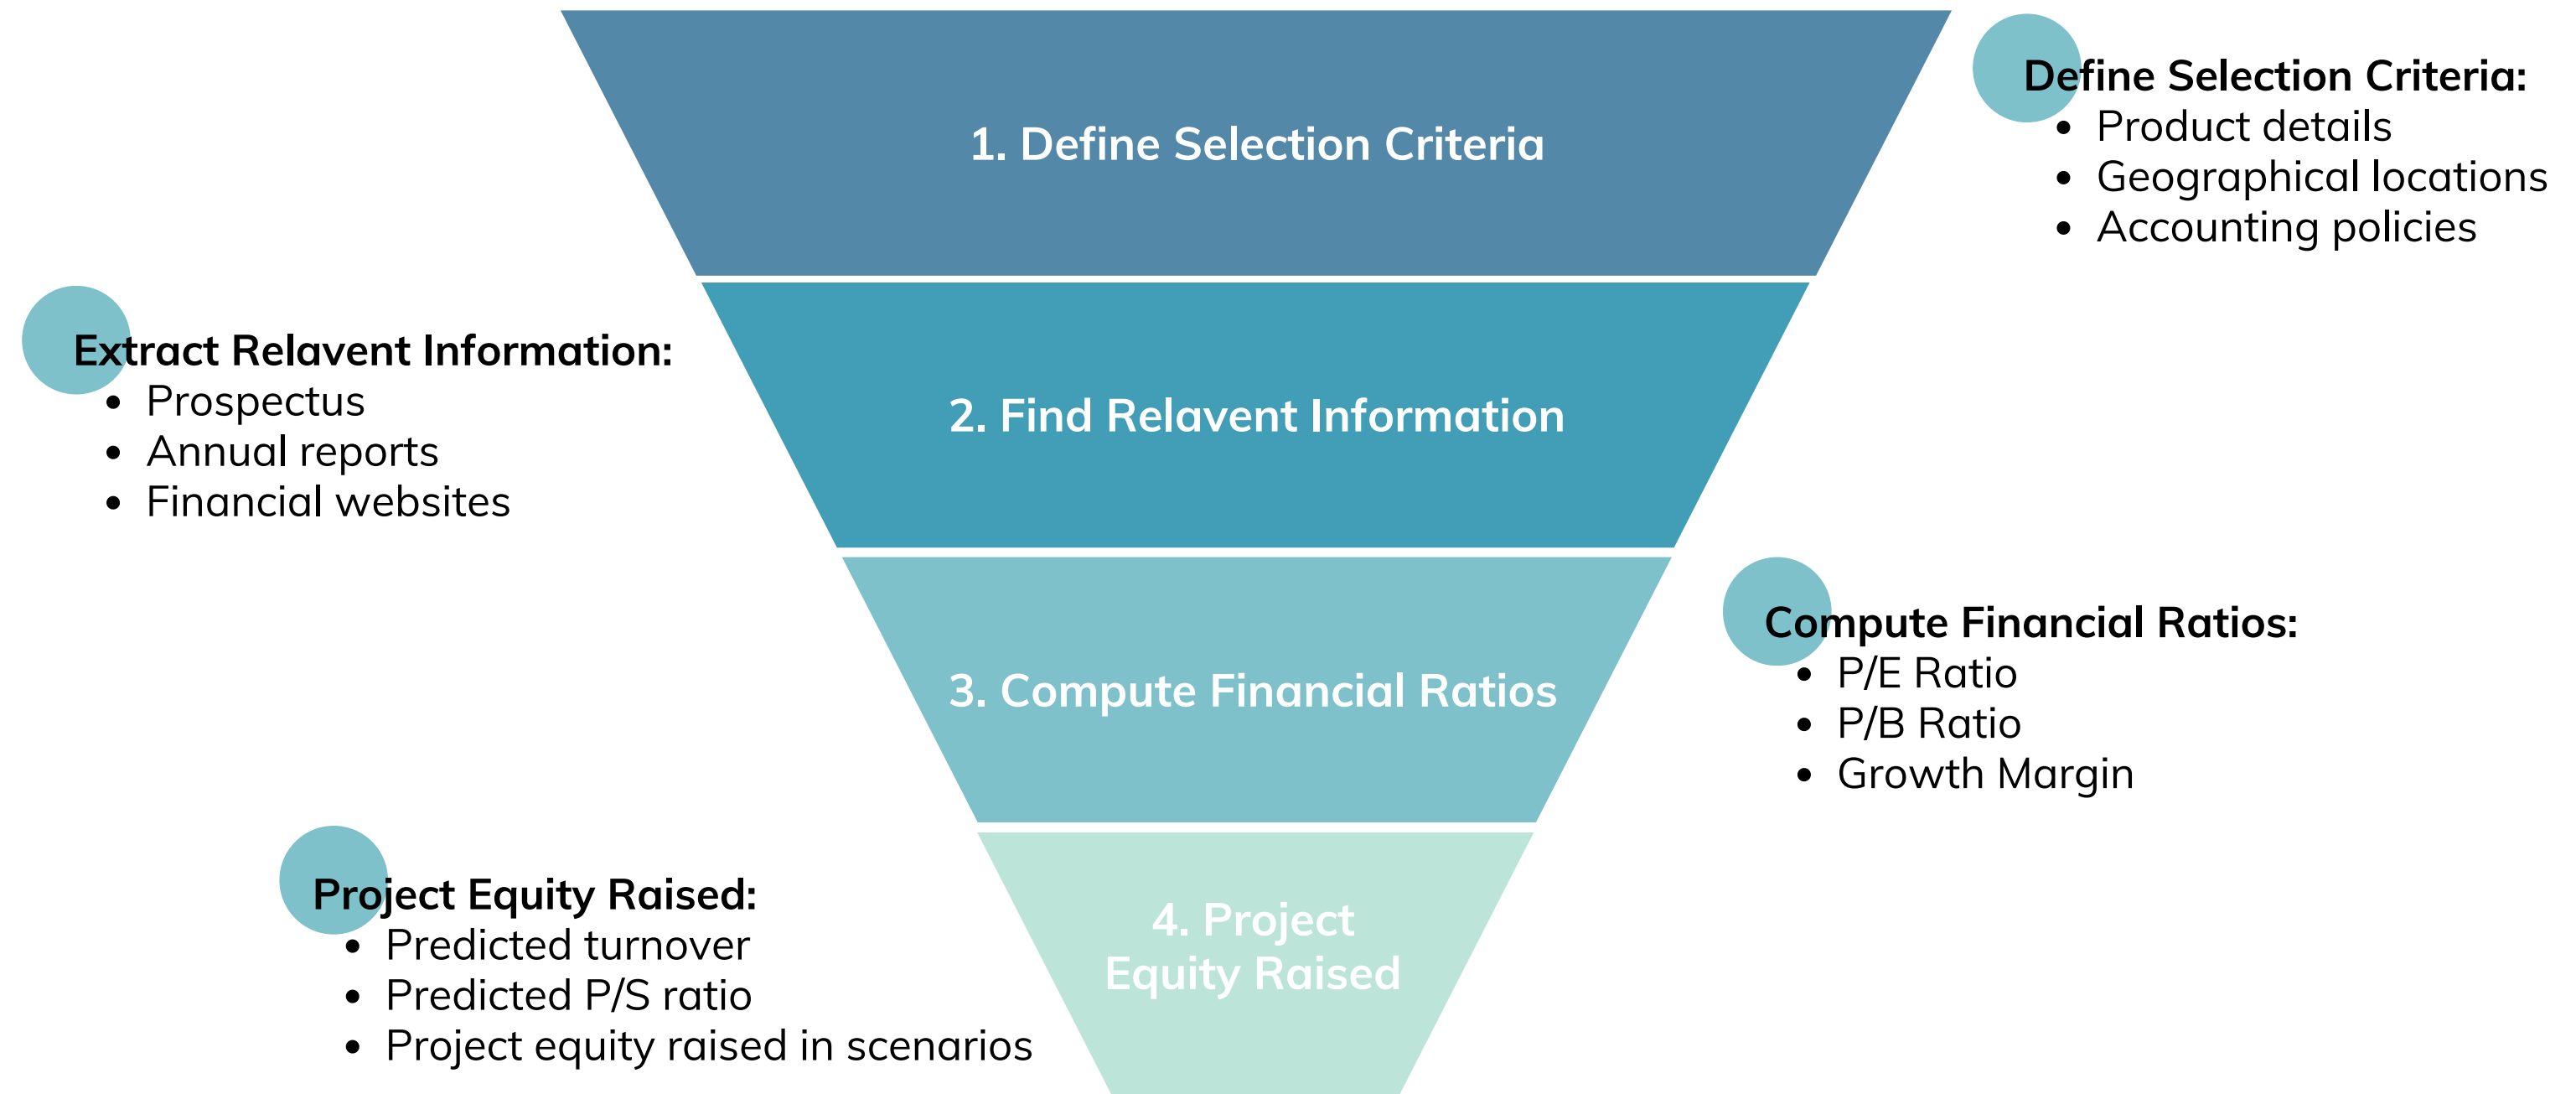

“

**Can I find a legit comparable
company for investment analysis
in 30 seconds?**

Original Approach

HOW?

- Idea Workflow
- Data processing
- Vector Similarity Search Explanation
- Technical Workflow

Idea Workflow

Web scrape
pre-processed Data

Extract product features
by LLM

Perform vector similarity
search from text embeddings

Dashboard visualisations

Data Processing

Put all different sources of data into
Large Language Model (LLM)
to process and generate output

Vector Similarity

The only way that we can compare words are **turning them into numbers (Vectors)**

Vectors similarity search compares the words' corresponding numbers (embeddings) to find out which terms are more similar

e.g. Apple vs Orange / Apple vs Airplane

Technical Workflow

Annual Reports &
Stock price

Web Scrape
through
Selenium

Extract product descriptions
through
Open AI API

Use RDS Service
to store relational data

Use PostgreSQL
to query relational data

Use Tableau
to visualise
insights

Financial Data

Use Chroma DB
to store and perform
vector similarity search

Use Tableau API (Tabpy)
to connect ChromaDB
and Python

WHAT?

- Dashboard Demonstration
- Future Advancement
- Before & After

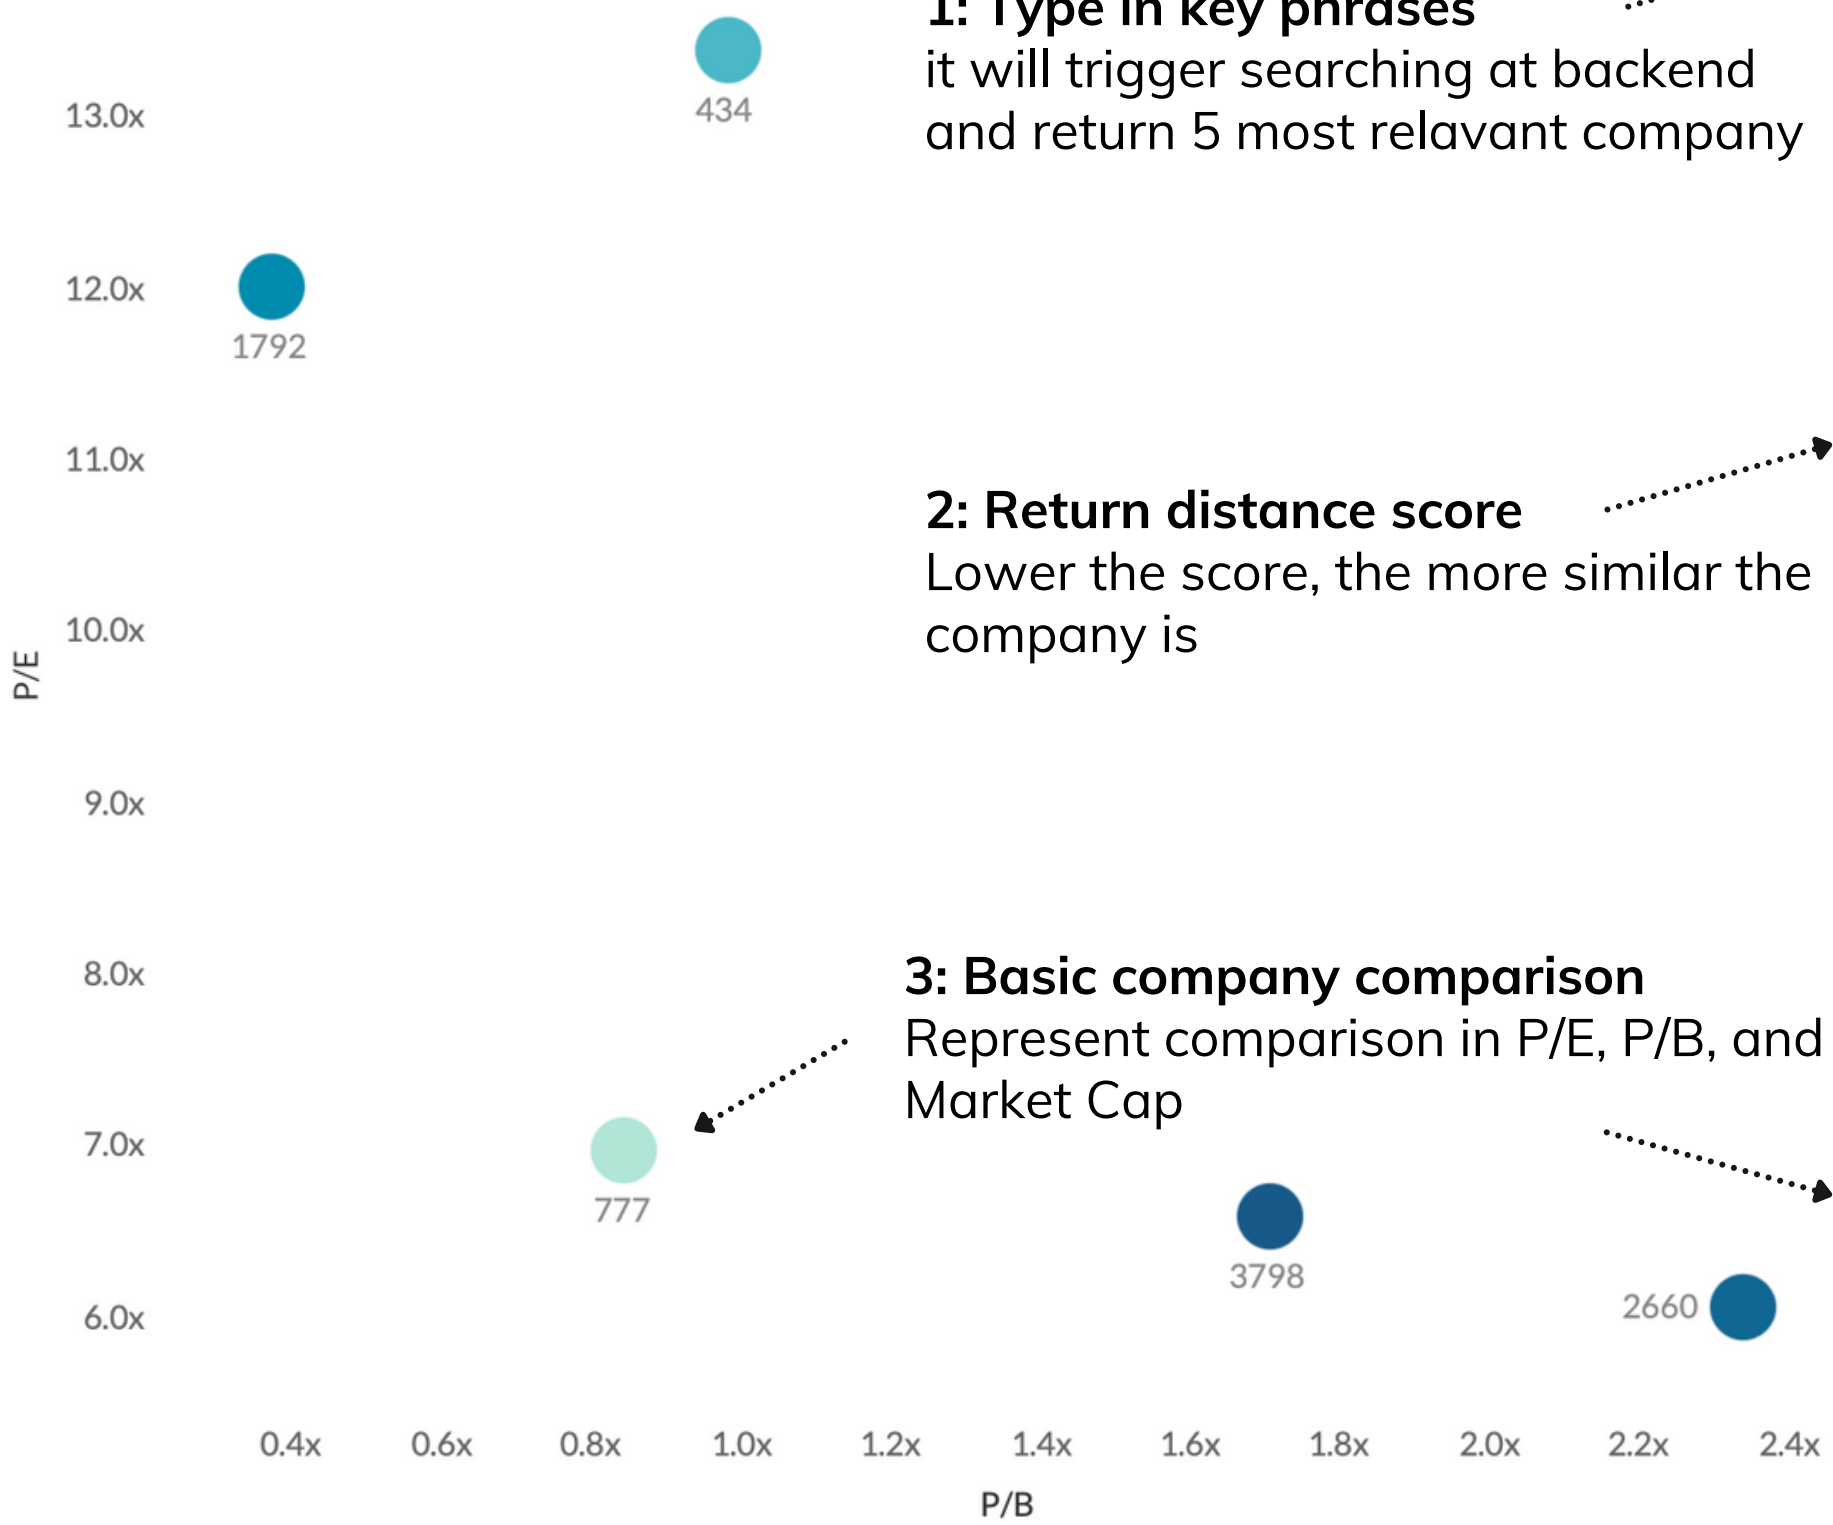

Dashboard Demonstration

PEER EVALUATION FINANCIAL ANALYSIS BY AI

Using LLM to extract features from more than 2000+ annual reports, and compare performance to provide insights on potential IPO investments

P/E vs P/B

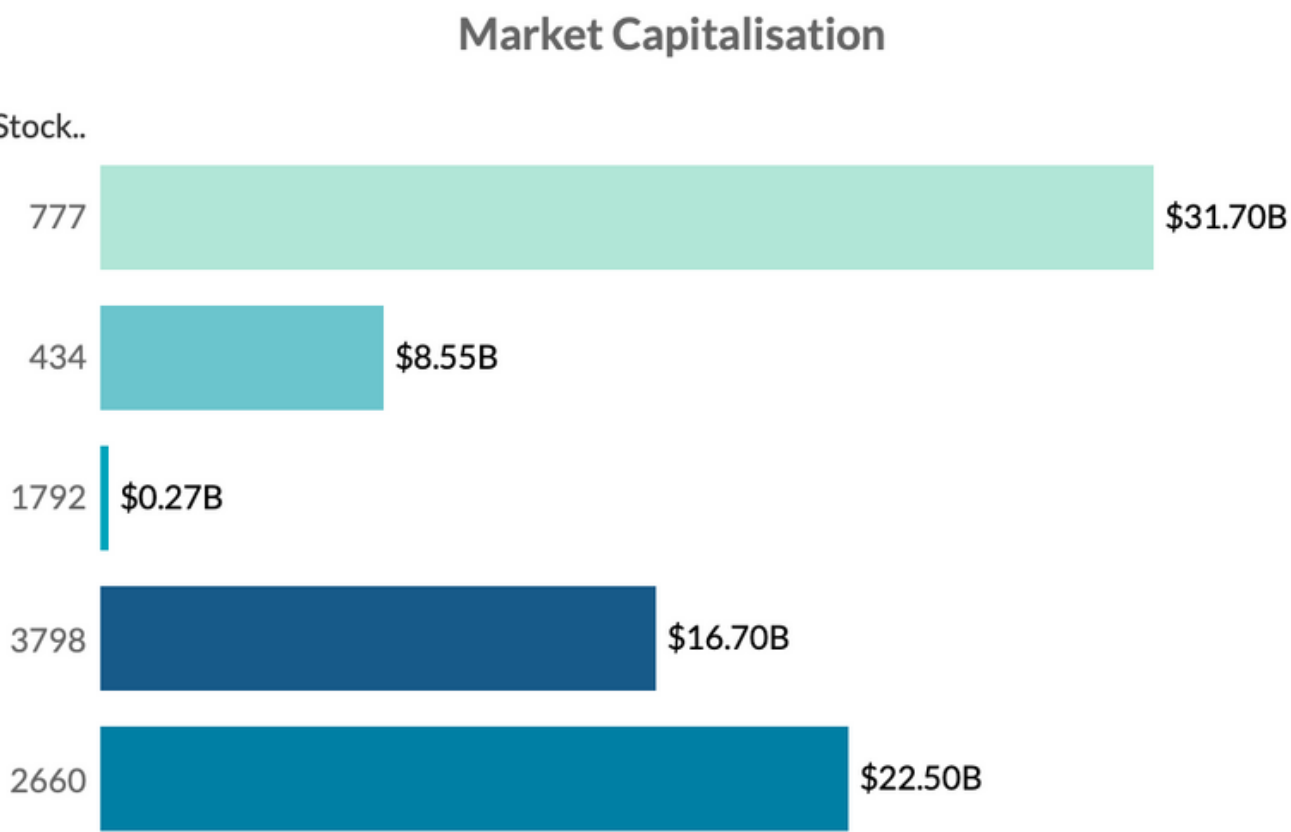

Company Descriptions

Produce mobile games mainly for gamers in china

Individual company performance
Select year or ranking, the dashboard will automatically refresh and show related information

Projection on equity raised
The ultimate purpose for the analysis is to know how much can they raise through this brokage firm

HOW MUCH CAN YOU RAISE?

Without Green Shoe Option

With Green Shoe Option

Predicted P/S

<

>

Predicted Turnover

Green shoe option in HK IPO lets the banks selling the company's shares at a degree that up to **15% more** shares than their originally planned. When lots of people want to buy the shares, this option is to **keep the share price stable** right after the company starts trading on the stock market.

Before project:

- Wasting time in reading annual reports and prospectus
- Lack standards for comparison
- Risky decisions from personal judgments and prejudices.

After project:

- Text inputs to find related comparables
- Multi-dimensional comparison
- Informed investment decisions from data visualisations

Future Advancement

What to look out for and refine

Public Data

Website may include more organisational and marketing data

Accounting Policies

Accounting policies are one of the criteria in some industry-specific comparable analysis

Vertical Analysis

Suppliers and customers data can be contributive to the comparable analysis

Thank You!
